

Thanks for posting this Junior role, It would provide me with a priceless opportunity to get true hands-on experience. I've been seeking out work experience and have recently completed some at dock10 with the MCR/Broadcast engineers. Alongside this, I have been completing certifications to enhance my knowledge such Dante's training courses, having recently achieved a Level 1 Dante Certification and enrolling in the Level 2 course.

My general personality is friendly and outgoing - I often strike up conversations with anyone I meet. I'm not afraid to ask clarifying questions if I'm unsure about something, as this helps me develop my knowledge to adapt to a work environment faster. This was especially prevalent during university, where my friend felt insecure about going up to the lecturer to ask a question, but I was more than happy to ask for clarification on a subject.

I also have a keen interest in the history of broadcast technology, as well as future advancements that could impact the field. This has given me a deeper perspective on current systems and how they might interact with legacy equipment.

For the past five years, I have self-hosted my own web services, and managed and security hardened my home server. This has given me experience with Linux servers, Docker containers and configurations.

Some of the services that I have hosted and managed were:

- Media servers to host my collection of CD, DVD, blu-ray and vinyl for easy access and preservation.
- Game servers
- Web Servers (I design my own websites and share my sound design and photography work on them)

Whilst I use Linux as my go-to choice when it comes to home-use, I have used OSX and Windows extensively in a production environment and have become very familiar with them.

The key skills that I have developed are centered around team working, problem solving and communication. During my time at university, I volunteered at the British Heart Foundation in Manchester Piccadilly; from this experience I worked with a wide range of people and further developed my communication skills with general customers. Prior to this, I completed an IT internship at DFDS Seaways - this was a perfect opportunity to develop my skills at explaining technical concepts to other employees in a professional environment; vital skills for a broadcast engineer.
