COVER LETTER

Dear BBC Hiring Team,

I am applying for the role of Junior Operations Engineer.

I believe I would be a great fit for this position as I have experience working under pressure during live broadcasts from my freelance work at Vinco Sports and Manchester Basketball. These positions developed my team coordination skills whilst providing opportunities to troubleshoot mid-production. I'm not afraid to ask clarifying questions if I'm unsure about something, as this helps me develop my knowledge to adapt to a work environment faster.

My personality is friendly and outgoing - during my time at university I collaborated with a range of international students, this developed my communication skills when language became an obstacle.

I have extensive experience with Linux server systems and networking from my time running my home server and learning about the principles of networking/AV over IP from studying on my Digital Production T-Level course alongside my Dante Level 1 certification.

I was able to apply these in a broadcast environment during my time at Manchester Basketball where we coordinate to rig the venue and derig after every game, ensuring that the correct signals are sent consistently and with redundancy in place and tested.

Sincerely,

Arron Ware
